

# DREAM IT. / BUILD IT.

CONSTRUCTION KITS FOR ADULTS

# GO AHEAD / BUILD IT YOURSELF!

We're confident you can! After all, we engineered our products with the Do-It-Yourselfer in mind! Choose from many standard sizes in a variety of length, width and height combinations. Or submit a "Special Order" request for your unique metal building solution.

## GARAGES AND BUILDINGS

FRONTIER

SUMMIT

Our garages and buildings feature all-steel framing for strength and fire resistance, plus metal roofing, siding and trim in popular standard (or special order) color options. Framing for a single garage door opening (9 ft x 7ft for 12ft W and 16ft x 7ft for all other widths) and one pedestrian door opening is included, along with anchor bolts. Garage and pedestrian doors, concrete work, and installation not included.

- **FRONTIER SERIES** features vertical sheet metal roof panels with horizontal siding panels. Roof purlins are included for vertical sheet metal application, but no side girts are required. Fewer frame components makes the Frontier design a lower cost alternative to our Summit building style.
- **SUMMIT SERIES** features vertical sheet metal roof and siding panels for a consistent look. Roof purlins and side girts are included for all-around vertical sheet metal application. The required side girt components in the Summit design result in a more substantial building frame.

### Available Sizes

Width: 10ft - 60ft

Height: 8ft - 16ft

Length: 20ft minimum length

Length extensions based on 4ft or 5ft on-center truss spacing.

Custom configurations available upon special request.

## CARPORTS AND SHELTERS

A VersaTube carport/shelter assembles easily on any level surface by following the instructions and using the ground anchors provided. The VersaTube carport kits use 2in x 3in heavy gauge galvanized steel tubing that can be configured to cover any equipment (from a compact car to a large RV).

- **CLASSIC SERIES** features horizontal application of sheet metal panels with the extra protection of rounded eaves. The Classic design has been the traditional mainstay of carport manufacturers and retailers for many years.
- **GRAND SERIES** features vertical sheet metal roof panels with ridge cap, gable and eave trim for an A-frame roof style. The Grand design is favored by many who want both an A-frame roof style and vertically applied roof panels that allow greater snow, rain and debris run-off - ideal for higher snow load areas.

### Available Sizes

Width: 10ft - 40ft

Height: 7ft - 16ft

Length: 20ft minimum roof coverage length (18ft minimum frame length)

Length extensions based on 4ft, 4.5ft or 5ft on-center truss spacing.

Custom configurations available upon special request.

GRAND

## LOAFING SHEDS AND HORSE BARN

LOAFING SHED

HORSE BARN

VersaTube is an ideal building system for livestock shelters - resistance to fire, termites and rot with the strength of steel. Compact bundles and pallets of easy-to-assemble components make hauling and installation at most any remote location just a truck drive away.

# ENGINEERED EASY / WITH STEEL

VersaTube's unique "Slip-Fit" design dramatically simplifies the installation process. This patented "swaged" manufacturing technique combines ease of assembly with the strength and durability of steel. Our use of a mandrel bending system results in a cleaner look and a stronger bend transition.

VersaTube uses heavy-duty 2in square, 2in x 3in and 2in x 4in rectangular galvanized structural steel tubing. Both interior and exterior surfaces are galvanized, providing a far superior finish when comparing to red oxidized finished frames. And there is simply no comparison to steel for terminate and rot resistance.

**GALVANIZED PROTECTION**

**EASY "SLIP-FIT" ASSEMBLY**

**SMOOTH MANDREL BEND**

## Engineering

- Standard roof pitch is 3:12 for all VersaTube structures.
- Consult your local building permit department for local loading requirements.
- Stamped engineering drawings are available for an additional charge.

## COLOR OPTIONS

VersaTube provides 29 Gauge powder-coat finish steel roofing and siding that carries a 20-year paint warranty. Popular roof, siding and trim color options for garages, loafing sheds, and horse barns are shown below. Other colors are available through a Special Order quote.

## INSULATION

Reflective radiant barrier insulation has a white foil surface on one side and is reflective on the other side. It provides a Class A/Class 1 fire rating and, just like the VersaTube framing system, it's easy to install.

- Excellent vapor barrier, reduces condensation and seals tight
- Reflects up to 97% of radiant heat
- Convenient E-Z peel tab and is non-toxic - no fiberglass and no itching
- R-Value ASTM C-976 - Down 8.33, Horizontal 7.00, Up 6.14
- Finish Dimensions: 1/4in Thickness; 48in Width
